Digital Signal Processing (DSP) is a vast and fascinating subject which has exploded in application in recent decades. In its simplest form, high-pass, low-pass, notch, or bandpass filters can be implemented in the digital domain, with far greater precision and stability than analog counterparts, and very often at much lower cost. Fourier Transform techniques, impossible in the analogue domain ...

computers or more specialized digital signal processors, to perform a wide variety of signal processing operations. The digital signals processed in this manner are a sequence of numbers that represent samples of a continuous variable in a domain such as time, space, or frequency. In digital electronics, a digital signal is represented as a pulse train, which is typically generated by the switching of a ...
