Most protection circuits I looked at disconnect the battery when an overcurrent situation occurs, a PTC for instance allows a larger current for a certain amount of time until it is heated so far that it disconnects or limits the current, electronic protection circuits do the same but disconnect faster.

An electric motor is an electrical machine that converts electrical energy into mechanical energy. Most electric motors operate through the interaction between the motor's magnetic field and electric current in a wire winding to generate force in the form of torque applied on the motor's shaft.
