[High Rise Building Maintenance Manual](#)

A typical developer-built, high-rise building will have a single or duplex booster pump in the basement. The pump serves the entire building with pressure reducing valves on all of the lower floors where the supply pressure will exceed 80 psi. This type of system design with a single booster pump package and pressure reducing valves is a very energy and maintenance inefficient plumbing system ...

Employing high-performance HVAC equipment in conjunction with whole building design can result in significant energy savings. Typically, a 30% reduction in annual energy costs can be achieved with a simple payback period of about three to five years. And, if the payback threshold is extended to seven years, the savings can be about 40%. These figures apply to buildings that offer conventional ...
